

Would you like to learn more about your child's movement, development, and body composition?

We are looking for children ages 1 to 10 with:

- Typical development
- Down syndrome
- Autism Spectrum Disorder

to participate in an exciting research study.

This study will involve:

- One appointment at our motor development laboratory at Michigan State University, where we will measure your **child's body fat** and **motor skill development**.
- Your child doing normal activities at home while wearing a **motion sensor**.
